How to contribute to reduce food risks through communications?

Risk Communication definition

There are two moments for communication in reduction of food risks

Permanent communication:

Create trust and legitimize the action of public service to the community.

Communication in critical situations:

using the websites mentioned, they are analyzed case by case and are disseminated through press releases and political or technical spokesmanship, depending on the type of critical situation.

Risk communication is not only a scientific process, is a social process.

In this process it influences:

- The relationship between citizens and public institutions
- The socio-economic situation of the country (including the nutritional situation)
- Political credibility
- The technical and communication capacities of the authorities
- The link between science and public policy
- The ethical context
- Education
- The ethical social and political commitment of the industry and food producers

Theory is usually easier...

the communications must be clear, understandable and useful

How can we create clear, understandable and useful messages, if:

we don't know what people know or doesn't know about food safety;

Don't know how they acquire knowledge, how they assimilate it, and what they know in advance of a certain topic.

And worse:

If we never have never being in their minds before, is it good to make an appearance only in emergencies?

In our opinion we must educate, and that is a task that must be undertaken by a public institution trough communication.

The ways to educate are multiple and varied.

para apoyar la Educación Alimentaria

Why did we do it?

There is no adequate "perception of risk"

We must enter (urgently) in the imaginary of people, in their dreams...

"Incidents related to food safety" is not the same as "food safety"

Generally, if an analysis is made about the news, articles and interviews related to food safety issues that are published daily in the media, about 90% address, rather incidents related to food safety"

Through the media,

citizens know much more about incidents which food becomes unsafe rather than food safety.

this determines their perception of risk

HOW SAFE IS YOUR FOOD?

And the perception of risk of our Graphics Designers...

How can we help to change this perception?

Generating a positive communication, one characterized by having educational components and that seeks to enter the imaginary of people, to leverage what they know and are familiar to, to connect with their memory

Our work in risk communication is based on non-formal education processes that establish a relationship with the senses...

music, games and dance!

as a contribution to regulatory policies for formal consumer education actions and risk management in general

Human being, is only fully a human being when he plays

Friedrich Von Schiller

And how to do this from a public institution?

We set out to put creativity at the center of our work because we had the ideal conditions:

We did not have or have much money Nobody expected anything from us Nobody knew about our existence

CREATIVITY?

What is creativity?

? Is the ability to create new ideas or concepts through new associations between ideas and known concepts, that normally **produce Original Solutions.**

So we started to build our own risk communication model...

How to create trust?

- Recognizing us
- Getting closer
- Providing brief but key information
- Taking care of us (providing advices)
- Providing good surprises that can be remembered (experiences)
- Responding quickly
- Drawing attention in a permanent and original way

as strategy and as a tool to be trustworthy and to be present

changing my point of view

on how to make serious communication basing on scientific evidence

(break small schemes, risk and leave aside certain prejudices)

how can I make presences if I do not have money?

Trust!

through a permanent presence in platforms

where our stakeholders move and interact

Our dream is to build a risk communication based on creative processes using music, games and dance as tools with the aim of entering into the memory of children (fundamentally)

and also of public and private institutions with related policies (build alliances)

Why?

Because it has been proven that music, games and dancing have a positive impact on memory and can therefore, help to generate changes in the habits of the population

How to be creative in a normative environment?

- 1- We all are creative, it's just sometimes we forget to take creativity to work
- 2- Our life experience might is as important as our academic formation
- 4- Spend some minutes laughing
- 5- Ask everything to everyone
- 6- Put our ideas to test with the most skeptical person we can find
- 7- Raise technical issues to our...
- 8- Give more credit to our perception and instinct

INO(IDATE Y (OME SALVDABLE "Be safe and eat healthy:

campaign which objective is to make Chilean population familiar with the almost unknown concept of "food safety".

Objective:

to make Chilean population familiar with the concept of "food safety"

Aimed to:

children and adults (food consumers)

means of disseminating:

schools, events, fairs, social networks, public transportation

Be safe... would be the base of our communicational proposal to reduce food risks.

(Karen's Strange Microworld)

Objective:

To teach children and adults the basic concepts of hygiene in food handling to produce safe food

Aimed to:

students of elementary school and high school, teachers, food handlers

Means of disseminating:

schools, events, fairs and seminars

Objective:

to diseminate the slogan: Showing all the links that exist along the Food chain and each sector 's responsability on each of those links.

Aimed to:

Consumers and intermediaries of food stuff

Means of disseminating:

situ and Youtube www.achipia.cl

(The Big race of food safety)

we developed a large size game in which children throw a giant dice and pass stages and challenges, meanwhile they learn about safe and healthy food.

(The Fruitants: nutritious music)

In order to support the implementation of public policies aimed to make a change in food behavior of the Chilean population,

we created a band in costumes of fruits that play songs related to a better diet.

FRUTTPUPPETS

Objective:

To create educational material to support the work of kindergarten teachers to foster a food safety culture in children of kindergarten and elementary school.

Aimed to:

children from 3 to 8 years old

Means of disseminating:

Kindergartens, schools, events for children, fairs, and seminars.

Ministro de Salud Ilama a la calma por alerta alimentaria de moho en Nan

Respecto a la Alerta Alimentaria Nacional dictada el viernes 27 de julio por el Minsal, debido a que tras una investigación fue detectada la presencia de moho fuera de los rangos tolerables en 10.092 unidades del producto Nan Prematuros (también conocido como PreNan, de Nestlé), el ministro de salud realizó un llamado a la calma y enfatizó en que se está monitoreando la situación.

Contexto:

"Este sábado (28 de julio) llegaron cuatro lactantes al Hospital de Malpú y fueron dados de alta con recomendaciones de control. Lo claro es que en estas instantes no se puede establecer una causalidad entre las molestias gastrointestinales que han presentado estos lactantes y otros que han consultado en diversos recintos del país, y el consumo de esta leche que se sacó del mercado", manifestó el Ministro de Salud, Emilio Santelices.

Art and music as a vehicle to address food risks

Towards a new definition of risk communication

Conditions to develop creativity in food risks: The importance of organizational climate

- Give freedom to propose and to make trials and tests
- Combine the ludic with the technical as a formula to reach those we want to reach.
- Allow questions and involve others in the initiatives
- Give more value to the proposals than just fulfilling the formalities of the bureaucracy

- Generate respect and clarity regarding responsibilities without going to the hierarchy
- Stop looking and doing only what has been established in my contract
- Have dynamics with coworkers (too much time at the office, lets have fun)
- Understand the central purpose of the organization
- Generate competences, not competition

aah! And a very important fact:
